EDUCATION

The University of Texas at Dallas

B.S., Computer Science

- **Achievements:** Winner, State Farm Challenge, WEHack 2026
- **Coursework:** Data Structures, Algorithms, Object-Oriented Programming, Discrete Mathematics

May 2028

Richardson, TX

EXPERIENCE

Colaberry | AI Product Intern

Jun 2026 - Present

- Own the Author Launch Engine product, a multi-tenant, multi-agent platform that markets an author's book continuously by drafting posts in the author's voice, creating memes, podcast and event pitches, and press kits, using React, Node/Express, PostgreSQL, and Docker; this automation increases author outreach and content output
- Write the product requirements document (16 requirements, 3 personas) and break it into 62 user stories across three releases, with a traceability check that blocks builds lacking must-have stories; reporting to the CEO and product team three times per week improves alignment and reduces missing features
- Translate the CEO's Trust Before Intelligence framework into product controls, adding human approval before publishing, sending, or spending, escalation for low-confidence or rights-risk output, and an append-only audit log; these controls raise compliance and cut risky releases
- Define a meme content path based on CEO feedback that uses the same approval gate and a feedback loop comparing meme versus text engagement per platform; this loop helps identify higher-performing formats and boosts overall engagement
- Specify nine LLM generators that convert sources such as arXiv and YouTube into reviewed briefing cards with deduplication, deterministic scoring, and per-generator cost caps; this setup speeds content creation and keeps operating costs within budget

Analytico | Founder & Product Lead

Jan 2025 - Jul 2026

- Founded and shipped a Facebook Page analytics dashboard for creators and small businesses who found Meta Insights unactionable; led product strategy, UI design, and full-stack development using Tailwind, Docker, PostgreSQL, and Vercel with a 5-person team, resulting in a usable dashboard adopted by early users
- Cut Instagram, TikTok, and X mid-build (each needed its own OAuth, app review, and schema) and scoped the calendar to planning-only to avoid an uncertain Meta App Review
- Built GrowthBot on Claude, grounded in the Page's live reach and engagement data; one shared "Objective" field personalized both GrowthBot and the AI calendar with no added UI

Association for Computing Machinery (ACM UTD) | Media Co-Director

Jan 2026 - Present

- Managed a membership base of 1,000+ members and earned promotion from Design & Marketing Officer to Media Co-Director, expanding the club's reach
- Co-lead Media, the team that markets all 7 ACM divisions, directing 19 officers; present shipped work, results, and upcoming campaigns at biweekly board meetings
- Built a request pipeline that routes 90+ semester requests from a single intake form into GitHub, Sheets, and Slack, using Apps Script to sync deadlines to a shared Google Calendar and Tasks, which streamlined assignment flow and kept projects on schedule
- Set request rules by event size (12–21 day lead times, 2-week design turnaround, template fallback for late asks) and kept work on-brand through a shared Figma library
- Grew Instagram to a record 314K views across 15.7K accounts in one month by A/B testing posting cadence and tailoring creative by audience

Kappa Theta Pi (Professional Tech Fraternity) | VP of Marketing

Jan 2026 - Present

- Promoted to VP of Marketing after leading the Director of Social Media role, where I built AI-driven content pipelines using OpenAI API and human-in-the-loop workflows, improving post-reach and informing strategic decisions
- Ran a multi-week recruitment funnel (content, Sheets tracking, Google Forms and SendGrid outreach) that converted 60 applicants into a 19-person pledge class (32%); managed a 3-person design team

Beats by Dre (via Extern) | Data Analytics Extern

Dec 2024 - Mar 2025

- Analyzed ~150 survey responses and Amazon reviews of the Beats Pill with LLM tools to isolate purchase drivers and price sensitivity; presented product recommendations, cutting analysis time ~50%

PROJECTS

Risk Radar

Apr 2026

- Winner, State Farm Challenge, WEHack 2026
- Built a home-risk platform (4-person team) turning inspection reports, claims history, and FEMA and NOAA data into an explainable risk score, with a room-level floor plan mapping fire, water, and weather risk

Muse

Jul 2026

- AI Shopping Product
- Set MVP success metrics (12+ product matches per board, under 30s to results) for an app that turns a Pinterest board into a shoppable page; built matching with a vision model and embeddings

SKILLS

- **Product:** Product discovery, user research, PRDs, roadmap prioritization, A/B testing, success metrics, Agile/Scrum, Figma
- **AI:** LLM apps, AI agents, human-in-the-loop workflows, structured outputs, LLM evaluation, embeddings, semantic search, model selection
- **Engineering:** TypeScript, JavaScript, Python, Java, SQL, React, Next.js, Tailwind, Node/Express, Flask, PostgreSQL, Supabase, MongoDB, Docker, Vercel, Git, Anthropic SDK, OpenAI API, Meta Graph API
